

Content

Preface	11
Introduction	13
1. Wastewater, Volumes and Composition	15
1.1. The volumes of wastewater.....	15
1.1.1. Measurements.....	15
1.1.2. Estimates.....	17
1.1.3. Population Equivalent and Person Load.....	20
1.2. Wastewater components.....	21
1.2.1. Domestic wastewater/municipal wastewater.....	22
1.2.2. Variations.....	30
<i>References</i>	33
2. Characterization of Wastewater and Biomass	35
2.1. Suspended solids.....	35
2.2. Organic matter.....	37
2.3. Nitrogen.....	50
2.4. Phosphorus.....	51
2.5. Alkalinity (TAL).....	52
2.6. Sludge volume index (SVI).....	52
2.7. Respiration rate of sludge.....	53
<i>References</i>	55
3. Basic Biological Processes	57
3.1. The biology in biological treatment plants.....	57
3.1.1. The organisms.....	57
3.1.2. Selection.....	61
3.2. Conversions in biological treatment plants.....	64
3.2.1. Biological growth.....	65
3.2.2. Hydrolysis.....	67
3.2.3. Decay.....	68
3.2.4. Storage.....	68
3.3. Aerobic, heterotrophic conversion of organic matter.....	70
3.3.1. Reactions, aerobic heterotrophic conversions.....	70
3.3.2. Yield constant, aerobic heterotrophic conversions.....	72
3.3.3. Nutrients, aerobic heterotrophic conversions.....	76

3.3.4. Kinetics, aerobic heterotrophic conversions	78
3.3.5. Heterotrophic microorganisms, aerobic heterotrophic conversions	78
3.3.6. The influence of environmental factors, aerobic heterotrophic conversions	79
3.3.7. Reaction rate constants, aerobic heterotrophic conversions	82
3.4. Processes for nitrogen removal	83
3.5. Nitrification	84
3.5.1. Nitrification reactions	85
3.5.2. Alkalinity	88
3.5.3. Kinetics, nitrification	88
3.5.4. The influence of environmental factors on nitrification	89
3.6. Denitrification	96
3.6.1. Denitrification reactions	97
3.6.2. Yield constant by denitrification	98
3.6.3. Nutrients, denitrification	99
3.6.4. Alkalinity	99
3.6.5. Kinetics, denitrification	100
3.6.6. The influence of environmental factors, denitrification	103
3.7. Biological phosphorus removal	107
3.7.1. Microorganisms	107
3.7.2. Reactions, biological phosphorus removal	109
3.7.3. Yield constant, biological phosphorus removal	111
3.7.4. Alkalinity	111
3.7.5. Kinetics, biological phosphorus removal	111
3.7.6. Environmental factors, biological phosphorus removal	112
3.8. Anaerobic processes	113
3.8.1. Strictly anaerobic processes	113
3.8.2. Reactions, anaerobic processes	116
3.8.3. Growth and soluble COD yield constants, anaerobic processes	116
3.8.4. Nutrients, anaerobic processes	117
3.8.5. Alkalinity, anaerobic processes	118
3.8.6. Kinetics, anaerobic processes	119
3.8.7. Gas production, anaerobic processes	121
3.8.8. The influence of environmental factors, anaerobic processes	122
3.9. Anaerobic ammonium oxidation (Anammox)	124
3.9.1. Microorganisms	124

3.9.2 Reactions, anaerobic ammonium oxidation	124
3.9.3. Yield constant, anaerobic ammonium oxidation	125
3.9.4. Alkalinity	125
3.9.5. Kinetics, anaerobic ammonium oxidation	125
3.9.6. Environmental factors, anaerobic ammonium oxidation	126
3.9.7. Competing conditions for anaerobic ammonium oxidation	127
<i>References</i>	128
4. Activated Sludge Treatment Plants	133
4.1. Mass balances, activated sludge plants	134
4.2. Concepts and definitions of the activated sludge process	140
4.3. Types of plants, activated sludge plants	147
4.3.1. Activated sludge with recycle	147
4.3.2. Single tank activated sludge plants	149
4.3.3. Contact stabilization plants	153
4.3.4. Biosorption plants	154
4.3.5. Design of activated sludge processes	155
4.3.6. Design by means of volumetric loading	155
4.3.7. Design by means of sludge loading or sludge age	156
4.3.8. Computer-aided process design	158
<i>References</i>	163
5. Biofilters	165
5.1. Biofilm kinetics	165
5.1.1. First-order reaction inside biofilm	167
5.1.2. Zero-order reaction inside biofilm	168
5.1.3. Summary – kinetics	172
5.2. Biofilm kinetic parameters	172
5.3. Hydraulic film diffusion	175
5.3.1. Kinetic expressions	175
5.3.2. Is hydraulic film diffusion important?	177
5.4. Two-component diffusion	179
5.4.1. Oxidant	179
5.4.2. Reductant	179
5.4.3. Is the oxidant or reductant limiting?	181
5.5. Filter kinetics	182
5.5.1. Ideally mixed reactors	183
5.5.2. Plug flow reactors	184

5.6. Mass balances for biofilters.....	187
5.6.1. Biofilters without recycle.....	187
5.6.2. Biofilters with recycle.....	188
5.7. Concepts and definitions.....	188
5.8. Types of plants.....	190
5.8.1. Trickling filters.....	190
5.8.2. Submerged filters.....	192
5.8.3. Rotating biological contactors.....	195
5.9. Design of biofilters.....	196
5.9.1. Design of trickling filters.....	196
5.9.2. Design of rotating biological contactors (RBCs).....	198
5.9.3. Design of biofilters for dissolved organic matter.....	198
5.10. Operational aspects of biofilters.....	202
5.10.1. Aeration in biofilters.....	203
5.10.2. Growth and sloughing off of the biofilm.....	203
5.11. Removal of particulate organic matter.....	205
<i>References</i>	206
6. Treatment Plants for Nitrification	209
6.1. Mass balances, nitrifying plants.....	210
6.1.1. Separate nitrifying plants.....	210
6.1.2. Combined removal of organic matter and ammonium.....	218
6.2. Types of plants for nitrification.....	220
6.2.1. Nitrification plants with separate sludge.....	221
6.2.2. Single sludge nitrification plants.....	221
6.2.3. Nitrification in two sludge treatment systems.....	222
6.2.4. Nitrification plants with separate sludge in filters.....	224
6.2.5. Two sludge nitrification plants in filters.....	224
6.2.6. Combined biofilters and activated sludge treatment plants for nitrification.....	226
6.3. Design of nitrifying plants.....	226
6.3.1. Design of activated sludge treatment plants for nitrification.....	227
6.3.2. Optimizing operation of nitrifying plants.....	228
6.3.3. Design of biofilters for nitrification.....	230
<i>References</i>	234
7. Treatment Plants for Denitrification	235
7.1. Mass balances, denitrifying treatment plants.....	236

7.1.1. Separate denitrifying plants.....	236
7.1.2. Combined nitrification and denitrification.....	241
7.2. Types of plants for denitrification.....	242
7.2.1. Denitrification plants with separate sludge.....	244
7.2.2. Denitrification plants with combined sludge.....	245
7.2.3. Biofilters for denitrification.....	249
7.3. Design of denitrifying plants.....	250
7.3.1. C/N ratio.....	251
7.3.2. Oxygen/stirring.....	256
7.3.3. Simultaneous nitrification-denitrification.....	257
7.3.4. Nitrogen gas in settling tanks and biofilters.....	258
7.3.5. Oxygen consumption.....	259
7.3.6. Alkalinity.....	260
7.3.7. Design of activated sludge plants with denitrification.....	260
7.3.8. Model based process design.....	262
7.3.9. Design of biofilters for denitrification.....	266
<i>References</i>	269
8. Treatments Plants for Biological Phosphorus Removal	271
8.1. Mass balances, biological phosphorus removal plants with activated sludge.....	271
8.2. Plant types, biological phosphorus removal.....	275
8.2.1. Biological phosphorus removal with nitrificationdenitrification and an internal carbon source.....	275
8.2.2. Biological phosphorus removal with nitrificationdenitrification and an external carbon source.....	276
8.2.3. Biological phosphorus removal with internally produced easily degradable organic matter.....	277
8.2.4. Biological phosphorus removal without nitrificationdenitrification.....	277
8.3. Design of biological phosphorus removal.....	278
8.3.1. Easily degradable organic matter.....	278
8.3.2. Design of tanks for biological phosphorus removal.....	279
<i>References</i>	285
9. Hydrolysis-acid production, Anaerobic Wastewater Treatment, Ammonium Oxidation	287
9.1. Hydrolysis-acid production.....	287
9.2. Anaerobic wastewater treatment.....	289
9.2.1. Introduction.....	289
9.2.2. Mass balances, anaerobic plants.....	289

9.3. Plant types, anaerobic processes.....	293
9.3.1. Pretreatment of wastewater, anaerobic plants.....	294
9.3.2. Plants with suspended sludge.....	294
9.3.3. Anaerobic filter processes.....	297
9.4. Design of anaerobic plants.....	298
9.4.1. Design of plants with suspended sludge.....	299
9.4.2. Design of anaerobic filter plants.....	304
9.4.3. Gas production, anaerobic processes.....	306
9.4.4. Optimization, anaerobic plants.....	309
9.4.5. Start-up, anaerobic plants.....	309
9.4.6. Disturbances, anaerobic plants.....	310
9.5. Anaerobic ammonium oxidation.....	314
9.5.1. Introduction.....	314
9.5.2. Mass balances, anaerobic ammonium oxidation.....	315
9.5.3. Plant types, combined nitrification and anammox.....	316
9.5.4. Design of plants with combined nitrification anammox.....	317
9.5.5. Optimization of plants with combined nitrification and anammox.....	318
<i>References</i>	319
10. Treatment Plants for Chemical Phosphorus Removal	321
10.1. Mass balances for phosphorus removal processes.....	322
10.2. Mechanisms for chemical/physical phosphorus removal.....	325
10.2.1. Precipitation.....	325
10.2.2. Coagulation.....	329
10.2.3. Flocculation.....	335
10.2.4. Phosphorus binding in soil.....	342
10.3. Treatment plants for phosphorus removal.....	344
10.3.1. Precipitants.....	344
10.3.2. Treatment processes.....	346
10.4. Design of plants for phosphorus removal.....	350
10.4.1. Chemical precipitation.....	350
10.4.2. Phosphorus binding in soil.....	357
10.5. Operational problems in phosphorus removal plants.....	359
10.6. Phosphorus recovery and reuse.....	360
<i>References</i>	361
11. Removal of organic micropollutants	363
11.1. Organic micropollutants in wastewater.....	364

11.2. Compound properties determining removal mechanism.....	365
11.2.1. Sorption.....	366
11.2.2. Volatilization.....	369
11.2.3. Biological removal.....	372
11.3. Removal affected by intrinsic OMP properties.....	374
11.3.1. Activated sludge plants.....	376
11.3.2. Biofilters.....	376
11.3.3. OMP removal in sludge treatment.....	377
11.4. Enhanced removal of OMP.....	378
<i>References</i>	379
